SUMMARY

DevOps Engineer with 3+ years of experience designing, automating, and operating AWS cloud infrastructure and Kubernetes platforms for enterprise applications. Experienced in Amazon EKS, Terraform, GitOps using ArgoCD, CI/CD automation, observability, and cloud-native infrastructure with a strong focus on reliability, automation, and production operations.

SKILLS

Cloud Platforms: AWS (EC2, S3, RDS, EKS, ECS, Lambda, VPC, IAM, KMS, ALB, Route53, Auto Scaling, CloudWatch, CloudTrail, ECR, EventBridge, Organizations, WAF), Azure (VMs, VNet, NSG, Azure Monitor, Azure AD, Key Vault)

Containers & Orchestration: Docker, Kubernetes, Amazon EKS, Docker Swarm

CI/CD & Release Engineering: GitHub Actions, Jenkins, ArgoCD, Helm, Blue-Green Deployments

Infrastructure as Code (IaC): Terraform, Terraform Modules, Remote State, Workspaces, CloudFormation, Ansible

Security & DevSecOps: IAM, RBAC, AWS KMS, Secrets Manager, HashiCorp Vault, SonarQube, Trivy

Observability & Monitoring: Prometheus, Grafana, ELK Stack, CloudWatch, SCOM, Grafana Loki, Grafana Alloy

Programming & Scripting: Python, Bash, Shell Scripting

Databases & Messaging: PostgreSQL, MySQL, Amazon RDS, DynamoDB, Redis, RabbitMQ

Networking & Architecture: VPC, VNet, Subnetting, Route53, DNS, Load Balancers, High Availability, Disaster Recovery

Site Reliability Engineering: SLIs, SLOs, Error Budgets, Incident Response, Root Cause Analysis (RCA), Capacity Planning

Systems & Tools: Linux (Ubuntu, RHEL), Windows Server, Git, GitHub, Jira, Confluence

PROFESSIONAL EXPERIENCE

Philips **Sep 2024 – Present | Bangalore, KA**
DevOps Engineer

- Engineered AWS infrastructure as code using Terraform for 15+ services, provisioning Amazon EKS clusters, VPCs, IAM roles, SNS topics, and networking resources, reducing provisioning time from 10 hours to 30 minutes (95%) while eliminating configuration drift.
- Administered AWS infrastructure including EC2, IAM, ALB, NLB, Route53, CloudWatch, SNS, S3, ECR, and VPC networking to deliver secure and highly available production environments.
- Administered production Amazon EKS clusters, performing Kubernetes upgrades, managed node group upgrades, cluster add-on lifecycle management, and workload optimization with minimal downtime.
- Optimized Kubernetes workloads using HPA, Pod Disruption Budgets, readiness/liveness probes, and resource tuning, sustaining 99.9% availability while improving cluster utilization by 25%.
- Architected reusable Terraform modules and GitOps workflows using ArgoCD and Helm, accelerating release cycles by 40% while standardizing deployments across environments.
- Designed CI/CD pipelines using GitHub Actions and Jenkins for automated builds, testing, vulnerability scanning, container image creation, and deployments to Amazon EKS, reducing deployment time by 35%.
- Implemented a centralized observability platform using Prometheus, Grafana, ELK Stack, Amazon CloudWatch, Grafana Loki, and Grafana Alloy, improving production visibility and reducing mean time to resolution (MTTR).
- Engineered an AWS Lambda-based log forwarding solution to stream Amazon CloudWatch Logs into Grafana Loki and configured Grafana Alloy on Windows servers for centralized log collection, improving cross-platform observability and accelerating incident investigation.
- Troubleshooted Kubernetes and AWS production incidents involving CrashLoopBackOff, ImagePullBackOff, OOMKilled, DNS failures, and networking issues, performing RCA and implementing preventive actions.
- Implemented IAM least-privilege policies, Kubernetes RBAC, encryption, audit logging, and multi-account AWS security controls supporting compliance requirements.
- Optimized AWS infrastructure costs through EC2 rightsizing, Kubernetes resource tuning, and removal of underutilized resources.
- Developed Python and Bash automation for health checks, monitoring, reporting, and routine operational tasks, reducing manual effort.
- Designed proactive monitoring and alerting for Kubernetes, RabbitMQ, Redis, PostgreSQL, and application endpoints using Grafana, Prometheus, CloudWatch, and Python automation.
- Participated in disaster recovery planning, backup validation, recovery testing, and business continuity documentation.

Philips **Jul 2023 – May 2024 | Bangalore, KA**
Graduate Intern

- Designed and implemented 20+ Grafana dashboards for 10+ critical services, reducing troubleshooting time by 50% through proactive anomaly detection.
- Investigated infrastructure and application incidents using Amazon CloudWatch Logs and Grafana, performing RCA and maintaining 99.9% service availability.
- Automated infrastructure patching across 150+ Linux and Windows servers using Ansible, reducing manual effort by 80% while meeting security SLAs.
- Developed Python-based URL monitoring integrated with AWS SNS, reducing issue detection time from hours to minutes.
- Automated event-driven workflows using Amazon S3 Event Notifications and AWS SNS, reducing manual operational effort by 80%.
- Configured Microsoft SCOM and Amazon CloudWatch monitoring for infrastructure health, alerts, dashboards, and operational visibility.
- Configured Docker log rotation policies, reducing disk utilization by 60% and improving container stability.
- Administered Linux servers and supported AWS services including EC2, IAM, CloudWatch, S3, SNS, and VPC resources.
- Developed Bash automation scripts and managed infrastructure code using Git to streamline daily operational tasks.
- Authored runbooks and operational documentation, reducing new engineer onboarding time from 3 weeks to 1 week.

Mini Projects

- EKS Infrastructure-as-Code Framework: Built reusable Terraform modules with remote state and workspaces to provision Amazon EKS clusters, VPCs, and IAM roles across dev, QA, and production environments.
- Centralized Observability Stack: Designed Grafana dashboards and alerting across Prometheus, ELK, and Grafana Loki, extending log collection to Windows servers via Grafana Alloy.
- Serverless Log Forwarding Pipeline: Built an event-driven AWS Lambda pipeline routing CloudWatch Logs into Grafana Loki for unified, cross-account log aggregation.
- GitOps CI/CD Pipeline: Configured multi-stage GitHub Actions pipelines with Trivy/SonarQube scanning, ArgoCD sync, and Helm-based deployments to EKS.

EDUCATION

Integrated MTech in Computer Science & Engineering **July 2019 – Aug 2024**
Vellore Institute of Technology, Vellore, Tamil Nadu
